When you look up at the sky at night, you're seeing a mystery,

F

The physicists are in a twist, about the forming of galaxies,

It's a very heavy issue, it's an issue of gravity,

It's a dark dark matter.

There needs to be a substance that we're just not detecting,

But it's hard to find material that just ain't reflecting,

Or maybe it's our theories they need some correcting,

It's a dark dark matter,

So, what does it feel like, how does it smell?

No, they haven't got a clue what the stuff consists of,

It's not made from any particles that they have a list of,

And now it's really pissing all the cosmologists off,

It's a dark dark matter.

So, what does it feel like, how does it smell?

If you had some in a bucket how could you tell?

Could you sit on it or sculpt it or eat it as well?

It's a dark dark matter.

Well they've found that finding evidence is fairly demanding,

Its stretched us to limits of our understanding,

And then it opened up a can of worms about why the universe is still expanding (at an accelerating rate)
